

# **NEW** From EDL! LET US TELL YOU ABOUT OUR NEW PRODUCTS!

For more than 50 years, Electronic Development Labs Inc. has manufactured high-quality temperature sensors and instruments that are used by a variety of industries. They are designed for use in a wide range of applications, from food safety to those in the most corrosive and hazardous environments. While we continue to provide these well-established sensor and instrument product lines, we would like to introduce you to some of our new products and services:

- 1. **CALIBRATION SERVICES:** We offer the calibration of sensors and/or instruments in our temperature metrology laboratory to meet your QC requirements and improve the accuracy of your measurements.
- 2. **PRACTI-CAL®:** This unique product allows in-house calibration of surface, IR and insertion/immersion sensors to maximize cost-effectiveness by lengthening their lifetime and preventing unnecessary repairs.
- 3. **SURFACE TRANSFER STANDARD (STS):** This product allows in-house calibration of surface sensors, providing preventative maintenance and increasing the confidence in your measurements.
- 4. **FUR-1200:** High-temperature calibration furnace for the testing and high accuracy calibration of thermocouples and RTD sensors. As well as calibration, long-term drift tests and temperature cycle tests may be performed, with two important safety features that protect both the reference and unit under test.

Simply place a check by the above product(s) or service that interests you, include any comments you have and FAX it back to us- we'll send you more information right away!
